

MAE 657.13 Cover and Edging Profiles for Construction Profile, Type i Modular System

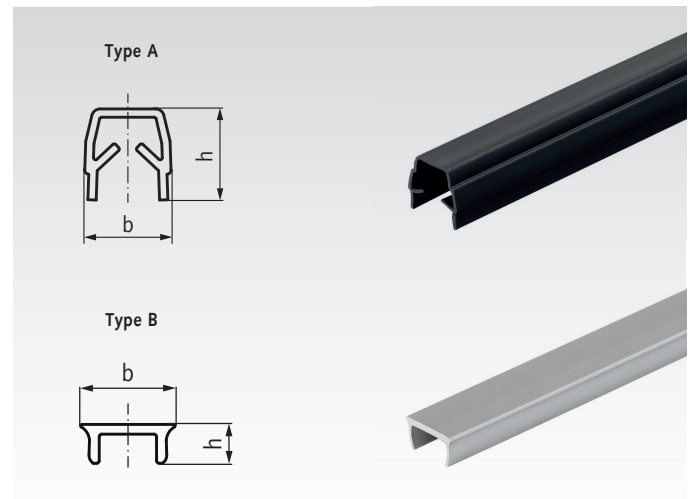

Material:

Type A: Plastic polyamide (PA), black.

Type B: Aluminium, natural color.

Cover and edging profiles can be used in a variety of ways in the slots of aluminium profiles. When used as a cover profile, the closed side faces outward. This protects the slot from dust and dirt while simultaneously concealing cables and hoses, resulting in a clean and visually appealing appearance.

When the profile is used as an edging profile, the open side faces outward, allowing panel elements such as glass or PMMA sheets to be fixed directly into the slot.

Ordering Details: e.g.: Product No. MAE 657.13-5A-1, Cover and Edging Profile for Slot = 5 mm, Length 1 m

Cover and Edging Profiles, Type A

Product No.	Slot mm	b≈ mm	h≈ mm	s ¹⁾ mm	Length m	Weight g/m
MAE 657.13-5A-1	5	6	6,25	1,5 - 2,0	1	26
